In most cases, a **switch** to **Vyvanse** from **Adderall** is prescribed when **Adderall** cannot provide maximum symptom control throughout the day. **Adderall** may last for a less-period of time, for about 8-10 hours, and patients may need extra or additional short-acting amphetamines to control the symptoms. One of the biggest mistakes a clinician can make in this work is to **switch** from lisdexamfetamine (**Vyvanse**) to dextroamphetamine without lowering the dose. **Vyvanse's**

in this work is to **switch** from lisdexamfetamine (**Vyvanse**) to dextroamphetamine without lowering the dose. **Vyvanse's** dose is artificially inflated by the extra lis- (lysine). This amino acid adds to the molecular weight (and milligram dose) but not to the therapeutic activity. ADHDMedCalc.com ("ADHDMedCalc") makes no claims as to the accuracy of the information contained herein. Has anyone ever switched **from adderall** IR to **Vyvanse** and had a positive experience? I took **adderall** IR before babies and now post baby #2 I feel like it's not working. I take 20mg 2x a day and still struggle. The executive dysfunction, not being able to focus, etc is all still really strong. Would **Vyvanse** be worth a try? In most cases, a **switch** to **Vyvanse** from **Adderall** is prescribed when **Adderall** cannot provide maximum symptom control throughout the day. **Adderall** may last for a less-period of time, for about 8-10 hours, and patients may need extra or additional short-acting amphetamines to control the symptoms. Vyvanse is also a CNS stimulant. The difference is, Adderall starts out as **amphetamine** when

I might ask her if I can just go back to the **adderall**.  
 Comment.  
 MogranADHD. i have been taking 30mg XR **adderall** twice a day for a few years now, has worked well for the most part. I really want to **switch** to **vyvanse** but was a bit worried about having to start at 30 - 40mg i postponed making the **switch** because work was very hectic at the time. wondering what others think who have made the same **switch**. Long-Acting **Adderall XR 30mg** Quillivant60mg(note 25mg/5ml) AdzenysXR-ODT 18.8mg Quillichew60 mg AptensioXR 60mg(actuallyequivto ritalin 25.9 twice a day) Vyvanse70mg (more similar to Ritalin 20mg tidor **Adderall XR 30mg**) Concerta54mg (similar to Ritalin 20 mg tid in terms of total dose but may need a chaser) Has anyone ever switched **from adderall IR to Vyvanse** and had a positive experience? I took **adderall IR** before babies and now post baby #2 I feel like it's not working. I take 20mg 2x a day and still struggle. The executive dysfunction, not being able to focus, etc is all still really strong. Would **Vyvanse** be worth a try? Does Your Patient Seem To Be Struggling With The Adjustment To Remote Learning Or Work? Read About **ADHD Symptoms, Which Might Be Challenging For Patients In Quarantine. Long-Acting Adderall XR 30mg** Quillivant60mg(note 25mg/5ml) AdzenysXR-ODT 18.8mg Quillichew60 mg AptensioXR 60mg(actuallyequivto ritalin 25.9 twice a day) Vyvanse70mg (more similar to Ritalin 20mg tidor **Adderall XR 30mg**) Concerta54mg (similar to Ritalin 20 mg tid in terms of total dose but may need a chaser).

dose is artificially inflated by the extra lis- (lysine). This amino acid adds to the molecular weight (and milligram dose) but not to the therapeutic activity. Vyvanse is also a CNS stimulant. The difference is, Adderall starts out as **amphetamine** when it is ingested. Vyvanse is a slightly different chemical. When Vyvanse is metabolizing, the compound afterward (metabolites) is the **amphetamine**. Has anyone ever switched **from adderall IR to Vyvanse** and had a positive experience? I took **adderall IR** before babies and now post baby #2 I feel like it's not working. I take 20mg 2x a day and still struggle. But it also sounds like **vyvanse** in particular just isn't for you. I've only tried **adderall** myself, but have heard that **vyvanse** is "smoother", recreationally as well as in general. People say it doesn't feel quite as stimulating. I am recently **switching** from 25mg of **Adderall** to **Vyvanse 30mg**, just need some support of advise to help the **switch**. Backstory: I was diagnosed with ADHD at the age of 8. Put in therapy & given Wellbutrin. I had some super rare side effect to it & ended up hallucinating for 36 hours straight..
